WHAT IS SMART CONTRACT?

Smart contracts are computer programs or protocols for automated transactions that are stored on a blockchain and run in response to meeting certain conditions. In other words, smart contracts automate the execution of agreements so that all participants can ascertain the outcome as soon as possible without the involvement of an intermediary or time delay.

GLOBAL

BLOcxcuein

A blockchain is a distributed database that is shared among the nodes of a computer network. As a database, a blockchain stores information electronically in digital format.

Blockchains are best known for their crucial role in cryptocurrency systems, such as Bitcoin, for maintaining a secure and decentralized record of transactions. The innovation with a blockchain is that it guarantees the fidelity and security of a record of data and generates trust without the need for a trusted third party.

DECENTRALIZED CRYPTO WALLET

"Cryptocurrency wallets are the same as your regular wallets. The only difference is that they are used for storing digital currency. From a technical perspective, crypto wallets are basically application software intended for storing and retrieving your crypto assets.

A cryptocurrency wallet is a software program, which stores the public and private keys of an individual. The wallets also help users in interfacing with different blockchains for monitoring their assets and trading with them. Public and private keys serve as the foundation of crypto wallets."
